

# Dive Propulsion Vehicle *Specialty Course*

**Fasten your weightbelts and put your BCD deflators in their full, upright position!  
It's time to take a ride on the DPVs!**

TL Sea is 'launching' this specialty course for those who wish to enhance their diving experiences. **Zooming around during a dive** while using an underwater vehicle is probably one of the coolest sensations in diving. **All you have to do is let the machine do the work** to take you just about anywhere!

Open to all levels of divers, the **Dive Propulsion Vehicle (Scooter) Specialty Course** is conducted over one day and teaches the planning, organization, procedures, problems, **hazards and techniques** associated in diving with a DPV. We will show you proper battery care & maintenance, how to plan your dives and also certain diving techniques so you will get the most out of your DPV!

Our first dive will allow you to **practice basic vehicle handling skills** and the second dive prompts you to plan and execute a typical DPV dive. During this course, we will also show you how to properly ascend and descend with the unit, how to determine a turnaround point, **techniques for entering and exiting the water** and what to do if the unit fails or the propeller gets tangled underwater.

This is a valuable course for anyone who wants to **experience the sensation of buzzing around underwater** (waving at all your friends as you zoom by) moving safely at exciting speeds through the water!

Our course includes the following:

**One Classroom Session**

**Free DPV Rental & Insurance**

**Two Open Water Training Dives**

**Certification Card**

This specialty course also counts toward your **Master Scuba Diver Certification**.

**Please contact the Dive Center Today to Register!**
