

DRIFT DIVER

Specialty Course

Experience the Sensation of
'Flying' Underwater!

Our [Drift Diver Specialty Course](#) focuses on relaxation and proper body positioning, enabling the diver to virtually "**fly**" **underwater!**

While we cannot control the sea or its currents, we *can* control our bodies underwater. This course teaches you how to do this, making diving in currents fun!

Drift Diving has proven to be quite spectacular for those divers who have ever wanted to fly or become an astronaut as you will **float in a weightless environment** much like space. It's also a great course for those who have concerns when diving in current; we teach you **proper body positioning**, when to plan dives, how to use tide & current charts and helping people **overcome their fear** of currents.

Since many great dive sites in Puget Sound and around the world (like the Blue Corner in Palau and various sites in Cozumel & the Maldives) have current, **you will learn how to dive and relax** in it. Once a diver feels confident with their trained skills, their comfort level and diving enjoyment are markedly increased.

Drift diving is a **great adventure and a lot of fun!** Some people like the thrill of covering a lot of ground at a fairly rapid clip, while others don't like the idea of having the water current control them. In either case, we train you *how* to **establish control underwater** using the current to your advantage. This is accomplished several ways which we will teach you.

Our Drift Diver Specialty Course includes:

- **One Classroom Session**
- **One Full Day of Boat Diving**
- **Three Open Water Drift dives at "Special" Locations!**
- **Drift Diver Specialty Certification**
- **Certification Card**

This course also counts as one more step toward your [Master Scuba Diver Certification](#) and also satisfies the Drift Course Requirement for the all new, adrenaline-filled:
