

Project A.W.A.R.E.

Specialty Course

We will teach you how to help preserve our aquatic environment for generations

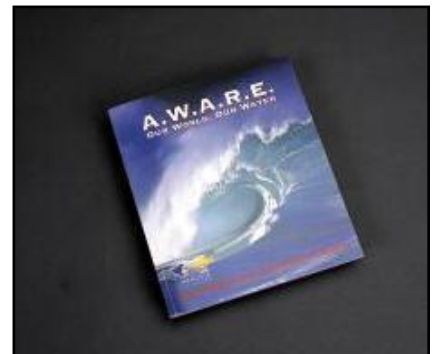

This course is for anyone - **both divers & non-divers** alike, with **no minimum age** - who want to learn more about the plight of worldwide aquatic ecosystems, and what we can do to protect them. It will amaze you to see the beauty of the underwater realm and **what part the reefs play** in our everyday lives.

We'll discuss the degradation of the **coral reefs & conservation measures** to help protect our aquatic resources. We will also explore interesting topics such as **Seafood Watch**, the 6 most threatened marine regions of the world, the role divers can play to help **protect the environment**, and more.

While there is no diving associated with this course, it's a precursor to our **Beach Cleanup** project scheduled each Spring.

This course includes the following:

- One Classroom Session
- Project A.W.A.R.E. Manual
- Certification Card
